DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 1 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Applicant, in setting forth a method for solving multi-dimensional scientific and engineering design problems, has failed to set forth any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof as required by 35 U.S.C. § 101.

Claim 1 does not recite any more than a mathematical algorithm with no direct and specific application of the algorithm in performing a process according to the preamble ("for solving multi-dimensional scientific and engineering design problems"). Thus, the claim does not present an application of a law of nature or mathematical formula to a structure or process as required. *Diamond v. Diehr*, 450 U.S. 175 (1981).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3641

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,814,403 to Anderson et al.

Anderson et al. disclose composites and methods of making the same. The composite model is created using physical features begotten from laboratory testing, various engineering analytical equations (including deformation analysis), producing 3-dimensional matrices and resulting in solving tensor values (dynamics) for the material in question (see claims of Anderson et al. and col. 8, lines 44-46, col. 12, and col. 16, second paragraph through col. 17).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,044,210 to Nagtegaal

U.S. Patent No. 6,009,378 to Tang et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gabriel S. Sukman whose telephone number is 703-308-8508. The examiner can normally be reached on 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael J. Carone can be reached on 703-306-4198. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
